

Commodore 64/128 Kermit version 2.2

Kermit v2.2 is a powerful public-domain telecommunications program for your Commodore 64 or 128 (in 64 mode). This program, as its name suggests, implements the *Kermit* file transfer protocol and also has many other useful features, such as:

- **Comprehensive terminal emulation:** *Kermit* emulates most all of the features of a DEC VT-100 terminal very closely, including support for VT-52 mode, personal function (PF) keys, and the numeric keypad. C-128 users may use their extra numeric keypad and grey keys as well. *Kermit* also implements the Insert/Delete features of the VT-102.
- **Multiple display options:** *Kermit* can display 40 or 80 columns of text using a bit-mapped screen on a standard 40-column monitor, or, on a C-128, using the built-in 80-column screen (with an 80-column monitor). *Kermit* also supports the Batteries Included *BI-80* 80-column card for the C-64.
- **Graphics terminal support:** *Kermit* emulates the main features of the Tektronix 4010/4014 graphics terminal, with resolutions of 320 x 200 (C-64 screen) or 640 x 200 (C-128 screen).
- **Flexible file transfers:** *Kermit* has special file types to transfer PETSCII (Commodore's special ASCII) and standard ASCII text files, binary files (graphics screens, etc.), *Speedscript* (Compute!'s popular word processor) files, and *Power-C* C language source code files. All necessary conversions are handled automatically.
- **High-speed communication:** *Kermit* supports 2400 bps communication (but only when used on a C-128 with the built-in 80-column screen).

Kermit comes with complete on-disk documentation that can be viewed and printed out with any word processor and printer. A typeset and bound version of the manual is also available.

Because *Kermit* is in the public domain, you can obtain it from many sources, such as bulletin boards, user groups, and major network archives (ARPANET, BITNET). Dr. Evil Laboratories distributes *Kermit* on a 1541-format disk for \$5.00 (U.S. funds only; WA residents add 8.1% sales tax). The typeset manual is also \$5.00. All orders should be made payable to Dr. Evil Laboratories and sent to:

Dr. Evil Laboratories
P.O. Box 3432
Redmond, WA 98073-3432

(Please allow 3-4 weeks for delivery.)

Note: *Kermit* does not yet support the CBM 1660 or Volksmodem 6480 modems.
